1. The amendment filed March 30, 2005 has been entered.
2. The indicated allowability of claims 1-3, 24-26 and 28 is withdrawn in view of the newly discovered reference(s) to Majewski (4,395,719).
3. Majewski teaches two spaced piezoelectric actuators 20a, 20b surrounding unrestricted tube 14 and coupled to a driver for sequential actuation (Figure 2).
4. Upon reconsideration of the differences in subject matter and scope of the claims, restriction is deemed appropriate.
5. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, 28, drawn to an apparatus, classified in class 422, subclass 100.
  - II. Claims 24-26, drawn to a method of making, classified in class 436, subclass 183.

The inventions are distinct, each from the other because of the following reasons:

6. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method can be used to make a dispensing device that does not have the piezoelectric actuators mechanically coupled to the fluid chamber to alter a volume thereof or in which the driver does not simultaneously or sequentially actuate the actuators so as to dispense fluid droplets, i.e., a driver that actuates only one or the other actuator, dependent upon fluid volume in the chamber.

Art Unit: 1743

7. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

8. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

9. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1743

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
